

## Procedure After Leak Stop+ Shuts Off Water

1. Go to the appliance with the alarming Leak Stop+.
2. Press any button once to silence the alarm.
3. See if the sensor probe is shorted on metal, if applicable.
4. If the sensor probe is shorted on metal, properly correct it then go to Step 8.
5. If there isn't a short on metal, locate the wet sensor probe or rope sensor.
6. Dry the sensor probe/s or rope and prevent any more leaking.
7. If sensor probe or rope sensor were moved or disturbed, put back in the correct position. Ensure the sensor probes aren't directly contacting *any* surface.
8. Press the OPEN button to turn the water back on.

\* Note: The system won't leave water on until the sensor probe/s or rope sensor is dry.
