

Procedure After WaterCop Pro Shuts Off Water

1. Check to see which sensor was activated on the Control Panel
2. Check your Sensor Location Log to find where the wet sensor is located
3. Go to the sensor to look for water
4. Dry sensor probe and prevent any more leaking
5. For systems installed before 3/2022: Control Panel will then read “SENSOR # OK”
For systems installed after 3/2022: Control Panel will read “SENSOR # WET#” until valve opens
6. Press the OPEN button to turn water back on

Note: The system won't leave water on until the sensor probe is dry
